Student satisfaction and library provision:

An analysis of National Student Survey and Times Higher Education Student Experience Survey data

A CIBER working paper for Research Libraries UK

19 March 2011 Key findings

- There is considerable variation in library satisfaction across the sector, but RLUK member institutions score very significantly higher than the rest of the sector: a 6.5 percentage point premium in the National Student Survey..

- Library satisfaction ratings for RLUK institutions are high and consistent and they outperform the rest of the HE sector by some distance. If we report on the basis of the *average ratings* given to the 22 questions that make up the National Student Survey (NSS) rather than the percentage that mostly or definitely agree (the usual way that the data are reported), we find library provision (Q16) ranking third in both 2007 and 2009. If we focus just on those students that say they `definitely agree' with the NSS statements, then library provision is ranked second, only behind IT provision in 2007 and 2009. Library services and provision are clearly very much appreciated by students as part of their university experience.

- Library satisfaction is positively correlated with institutional size, so this aspect must be (and is in this report) controlled for in any analysis. Why larger institutions generally achieve higher levels of library satisfaction is beyond the scope of this project, but it is an interesting finding nonetheless.

- Library satisfaction and overall course satisfaction are positively correlated: students that rate their libraries highly, also tend to rate their overall course experience highly (or vice versa). The library effect is statistically very significant but small, explaining 2.6 per cent of the variance in overall course satisfaction.

- Two particular aspects of library provision are strong predictors of overall course satisfaction: staff training hours per student FTE and annual loans per FTE user. Libraries should consider the implications of this finding: investing in user training may be one simple strategy to enhance NSS ratings and build a closer and more personal relationship between students and the library.

- Library satisfaction, as measured in the National Student Survey, correlates positively and significantly with a wide range of Sconul measures. The five largest effects are given below:

  ⇒ *Professional staff as a percentage of total library staff (explains 16.2 per cent of variance in library satisfaction scores)*

  ⇒ *Gross library spend per FTE user (15.5 per cent)*

  ⇒ *Net library spend per FTE user*

  ⇒ *Spend on information provision per FTE user*

  ⇒ *Library floor space per FTE student*

- The overwhelming weight of evidence in this study is that library provision matters in terms the student experience and that protecting library staffing,

especially at professional level, and dedicating more resource to user training are two areas that need to feature strongly in any negotiations with institutional managers.

About this working paper

Most of the analysis in this paper relates to the most current (2009) data from the NSS. In the first six tables and the first graphic, we compare with 2007. Ideally, a wider range of years would have been collected and processed : unfortunately, the format of the public data is alarmingly inconsistent between one release and the next. Compiling a full set of NSS data in a common format for detailed statistical analysis would have been beyond the resources available for this project.

Student satisfaction with library provision in context

Tables 1-6 show just how much students appreciate library resources and services (Q16) in relation to all other aspects of university provision. Q16 is consistently within the top six, whichever way you report the data. The standard deviation for Q16 tends to be somewhat higher than for most other aspects of provision, so the best must be very good indeed.

The figure below compares the individual results for RLUK members (green) and all other HEIs (blue). Overall, there is a very wide spread of satisfaction across the whole sector, but RLUK institutions cluster very firmly at the topmost end.

Figure 1: Satisfaction with aspects of provision: RLUK and non-RLUK members compared
Clustered scatterplot

Open University included

RLUK members score very significantly higher (by 6.5 percentage points) than the rest of the sector in terms of student agreement with NSS Q16.

Table 8: Library satisfaction (NSS Q16): Differences by university sector***
Analysis of variance (ANOVA) test

| | | | | 95% Confidence interval for mean | | | |
	n	Mean	S.D.	Lower bound	Upper bound	Minimum	Maximum
Russell Group	20	84.3	6.30	81.4	87.3	70	97
Million+ Group	22	80.8	4.86	78.6	82.9	65	89
1994 Group	19	76.8	10.1 6	71.9	81.7	53	90
University Alliance	22	76.7	7.02	73.6	79.8	60	89
Non-aligned	44	75.7	9.82	72.7	78.7	56	94

ANOVA statistics: F=4.63, d.f.=4, p<0.1%
Open University excluded.

The table above shows that there are statistically highly significant differences in library satisfaction by university sector. As might have been expected, the

Russell Group is at the top. The table below shows that the source of that significant difference is clear blue water between the Russell Group and Million+ institutions at the top and the rest of the sector.

This is indicative of serious differences in student satisfaction across the whole sector.

Table 9: Library satisfaction (NSS Q16): Differences by university sector***

1994 Group	19	76.8	
Million+ Group	22	80.8	80.8
Russell Group	20		84.3

Open University excluded.

Student satisfaction and library provision

You will certainly not want to use this in public, but the following analysis reveals the outliers and those universities that really bombed it. (A similar analysis for RLUK members / non-members shows no RLUK outliers).

Does size matter?

Table 10: Library satisfaction (NSS Q16) and institutional size (*n*=127)
Bivariate correlation (Spearman's rho)

		The library resources are good enough for my needs (NSS Q16)
Academic staff (FTE)***	Correlation coefficient	0.370
	Significance	0.000
Students (FTE)***	Correlation coefficient	0.280
	Significance	0.001
Total users (FTE)***	Correlation coefficient	0.323
	Significance	0.000
Net library expenditure***	Correlation coefficient	0.377
	Significance	0.000
Total institutional expenditure***	Correlation coefficient	0.377
	Significance	0.000

This table shows five proxy measures for the size of the various institutions. In all cases, there is a very significant positive correlation between student satisfaction and size. So, the conclusion is larger institutions achieve higher ratings. To put this in a slightly different way, if we take total users as our proxy, then about 10 per cent (100 times the square of the correlation coefficient) of the variance in the student ratings can be explained by the size of the library.
For this reason (see Annex 2), we have created a series of derived indicators from the raw Sconul data, expressing them per student FTE or per user FTE, as seemed most appropriate. So the main analyses in this report create a more level playing field by accounting for the differences in size between institutions.

## Is library satisfaction related to overall course satisfaction?

In this section we look at the individual scores in the NSS for RLUK members. The heat map on overleaf needs some explanation. The columns represent the 22 NSS questions (see Annex 1 for the wordings). The rows are RLUK members. The cells contain the ratings given by the students for that aspect of provision (as measured by the percentage that mostly or definitely agree with the statements).

The median score across all 22 questions is 0.77 (77 per cent) and that is coded white. Higher scores are indicated by greens of increasing density, lower scores by reds.

So, looking down the column for Q16 we see a pretty consistent pattern of mainly green cells (so library provision is getting ratings in the upper half of all the ratings given). Contrast this with Q7-9 (student feedback), where there is clearly a lot to do.

Figure 3: Heat map showing distribution of 2009 NSS scores by question and RLUK member

So, library satisfaction at RLUK institutions looks pretty healthy. But is library satisfaction related to overall course satisfaction?

The evidence below (across all 128 institutions) is that the two are positively correlated with a high degree of statistical significance. We can conclude that they are not independent but the effect is relatively small – library satisfaction explains 2.6 per cent of the variance in overall satisfaction scores. However, the wording of Q22 is crucial here ("Overall, I am satisfied with the quality of the course") and a more general question, e.g. "Overall, I am satisfied with the quality of the institution") might have elicited a different outcome.

Table 11: Library satisfaction (NSS Q16) and overall course satisfaction (NSS Q22) [all 128 institutions]
Non-parametric partial correlation (Kendall's tau-b) controlling for institutional size

		Overall, I am satisfied with the quality of the course (NSS Q22)
The library resources are good enough for my needs (NSS Q16)	*Correlation coefficient*	0.161***
	Significance	0.009

We ran a stepwise linear regression on overall course satisfaction using the full range of derived Sconul indicators.

Table 12: Library satisfaction (NSS Q16) and overall course satisfaction (NSS Q22) [all 128 institutions]
Stepwise linear regression, controlling for institutional size

	Unstandardized coefficients		Standardized coefficients	t	Sig.
	B	S.E.	Beta		
(Constant)	80.65	1.90		42.47	0.00
Staff hours spent training per student FTE***	75.59	22.53	0.58	3.36	0.01
Annual loans per FTE user***	0.08	0.03	0.57	-3.31	0.01

ANOVA statistics: F=12.13, d.f.=2, p<0.001

Two aspects of library provision emerged as the best predictors of overall course satisfaction: staff hours spent in training per student FTE and annual loans per FTE user.

This simple model offers a good fit (R^2=0.708) to the data and encourages the following `thought experiment'. There is little that libraries can immediately do to increase the number of loans. However, staff training is directly under their control. The logic of the model above, is that if staff training were to increase by one standard deviation, then we should expect to see an increase in overall course satisfaction of one standard deviation times the standardized beta coefficient, all other things being equal. To put this in its crudest terms, doubling staff training per user would be roughly equivalent to raising overall course ratings by a couple of percentage points.

This is a deeply abstract exercise, but it does identify what appears to be a key library driver of overall course satisfaction. This would certainly fit with CIBER's ongoing Google Generation research that is revealing some deep concerns about information literacy among today's undergraduates in particular. More engagement would also create more of a personal bond between the respondents and the library.

What are the determinants of library satisfaction?

We now turn to Q16 (library satisfaction) and find that there is a significant positive correlation between satisfaction and a whole range of size-independent indicators of library provision. These are listed in descending order of importance.

One thing is striking is the weight given to staffing issues, perhaps a little more unexpected than obvious things like the availability of study places?

Table 13: Library services and provision: correlations with library satisfaction
Non-parametric partial correlation (Kendall's tau-b) controlling for institutional size

	The library resources are good enough for my needs (NSS Q16)
Professional staff as a percentage of total library staff***	0.403
Total gross library expenditure per FTE user***	0.394

Student satisfaction and library provision

Net library expenditure per FTE user***	0.384
Total expenditure on information provision per FTE user***	0.365
Library floor space per student FTE***	0.360
Full text downloads per FTE user***	0.344
Study place hours per week per student FTE***	0.331
Total serial subscriptions per FTE user***	0.318
Total study places per student FTE***	0.312
Total library posts per FTE user***	0.283
Professional library posts per FTE user***	0.280
Total institutional expenditure per FTE user**	0.193

Postscript: The Times Higher Student Experience Survey (THESES)

The THESES survey asks students the following question: "Based on your experience, how strongly do you agree that your university offers the following?". Answers are recorded on a 7-point scale where 1=`Strongly disagree' and 7=`Strongly agree'. The areas of provision and their post fieldwork scoring weights (in brackets) are given below:

> *High quality staff/lectures (2)*
> *Helpful interested staff (2)*
> *Well structured courses (2)*
> *Good social life (2)*
> *Good community atmosphere (2)*
> *Good environment on campus (2)*
> *Good extra-curricular activities (2)*
> *High quality facilities (2)*
> *Personal requirements catered for (2)*
> *Good student union (1.5)*
> *Good support/welfare (1.5)*
> *Good relationship with teaching staff (1.5)*
> *Centralised facilities (1.5)*
> *Industry connections (1.5)*
> *Good accommodation (1.5)*
> *Security (1.5)*
> *Cheap shop/bar (1)*
> *Tuition in small groups (1)*
> *Fair workload (1)*
> *Sports facilities (1)*
> *Library (1)*

Note that library provision is unweighted in the final aggregation and so has relatively little effect on the overall rating. In the NSS all areas of provision are treated as of equal importance.

Table 14: Summary THESES scores, 2007 to 2010.
Mean ratings on a 7-point scale, where 7=`Strongly agree'

	Mean rating on all questions (RLUK)	Mean rating for library (RLUK)	Mean rating for library (non-RLUK)	RLUK library ranking (of 21)
2007	5.6	5.9	5.9	5
2008	5.6	6.0	5.8	2
2009	5.7	6.1	5.9	2
2010	5.7	6.1	5.9	2

**Figure 4: Times Higher Student Experience Survey overview: RLUK members only**
Mean ratings on a 7-point scale, where 7=`Strongly agree'
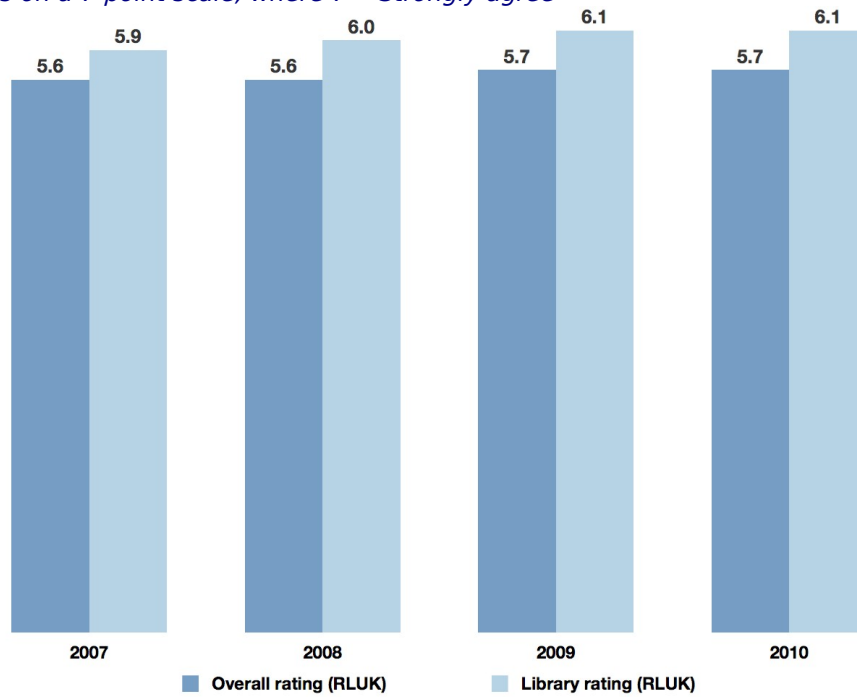

Figure 5: Times Higher Student Experience Survey overview: RLUK members and non-members compared for quality of library provision
Mean ratings on a 7-point scale, where 7=`Strongly agree'

ANNEX 1: NSS questions

Q01. Staff are good at explaining things
Q02. Staff have made the subject interesting
Q03. Staff are enthusiastic about what they are teaching
Q04. The course is intellectually stimulating
Q05. The criteria used in marking have been clear in advance
Q06. Assessment arrangements and marking have been fair
Q07. Feedback on my work has been prompt
Q08. I have received detailed comments on my work
Q09. Feedback on my work has helped me clarify things I did not understand
Q10. I have received sufficient advice and support with my studies
Q11. I have been able to contact staff when I needed to
Q12. Good advice was available when I needed to make study choices
Q13. The timetable works efficiently as far as my activities are concerned
Q14. Any changes in the course have been communicated effectively
Q15. The course is well organised and is running smoothly
Q16. The library resources and services are good enough for my needs
Q17. I have been able to access general IT resources when I needed to
Q18. I have been able to access specialised equipment, facilities or room when I needed to
Q19. The course has helped me present myself with confidence
Q20. My communication skills have improved
Q21. As a result of the course, I feel confident in tackling unfamiliar problems
Q22. Overall, I am satisfied with the quality of the course

ANNEX 2: Sconul indicators

Raw indicators

Number of libraries
Library floor area
Total study places
Open access workstations
Study place hours per week
Workstation hours per week
Total catalogued book stock
Book acquisitions
Current serial titles
Number of ebooks
Academic staff (FTE)
Students (FTE)
Total users (FTE)
Annual visits
Average users in the library
Annual loans
Full text downloads
Ebook accesses
 Active borrowers
ILL applications made
ILL applications satisfied
Staff hours spent training
User hours received in training
Sheets printed on library computers
Directional enquiries during sample week
Information enquiries during sample week
Total enquiries during sample week
Professional library posts
Total library posts
Book expenditure
Total serial subscriptions
Ebook expenditure
Total electronic expenditure
ILL expenditure
Total expenditure on information provision
Total equipment expenditure
Building utility expenditure
Total gross library expenditure
Net library expenditure
Total institutional expenditure

Derived indicators
